Program Learning Outcomes

1. The student will apply the scientific method to perform experiments and interpret data.
2. The student will demonstrate knowledge of the structure, metabolism, genetics, physiology and molecular processes of cells.
3. The student will describe the theory of evolution through natural selection and discuss how it impacts the study of biology.
4. The student will apply proper scientific terminology and taxonomy and explain how classification schemes relate to phylogenies.
5. The student will describe microbial mechanisms of pathogenicity.
6. The student will describe the anatomy and physiology of tissues, organs, and organ systems.
7. The student will describe the fundamental principles of maintaining homeostasis in organisms.
8. The student will be able to describe the interactions among organisms as related to their ecosystem.
9. The students will be able to explain the principles of genetic inheritance, apply them to predict outcomes of genetic crosses, and identify inheritance patterns in genetic data.
